

the pro clima way

The Benefits

German-engineered for all Australian Climates

For the Leading Expertise in Moisture and Condensation.

Quality Products

Our products provide market-leading weathertightness and airtightness performance. The TEEE layer in our external WRB's (Weather Resistive Barrier), the intelligent functionality of our air barriers, and the 100-year adhesion of our tapes, all highlight the quality of our products and systems.

Quality Design

The best products only get you so far. Using the right products, in the right locations, in the right climates, is just as important. We have the expertise to guide you on what systems will work where, ensuring that wherever your project may be, it will be a healthy, durable and energy-efficient build.

Quality Workmanship

Planning is great, but execution is just as critical. In our network we have boots on the ground across Australia providing on-site training on the installation of our products.

pro clima's systems are far ahead of standard industry practice, so we ensure we're educating trades about how to achieve the highest levels of weathertightness, airtightness and condensation control, using pro clima's solutions.
