Designing a Future

INTELLO® PLUS
INTELLO® PLUS
INTELLO® PLUS

German-engineered for all Australian Climates

Ensuring Your Masterpieces Last a Lifetime.

Healthy and Low-impact Builds

pro clima's systems allow you to design healthy buildings that reduce the risk of adverse health outcomes caused by moisture and condensation. Our solutions ensure buildings are designed to last for generations, minimising the impact on the environment.

Standing the Test of Time

Australia has a harsh climate, but using pro clima's solutions ensures that your designs are built to withstand years of scorching heat and torrential rains. We ensure the durability of the structure by keeping it free from trapped moisture, significantly reducing the risk of timber rot and corrosion.

Energy-efficient Design

pro clima's systems reduce the amount of energy needed to heat and cool your build. Reducing air leaks through your walls and roofs keeps the build warmer in winter and cooler in summer. You can save your clients' money, and reduce their carbon emissions at the same time.
