W-1133-2 SKILLION SOLITEX® UM ON VERTICAL PURLIN

NOTES:

- 1: Additional ventilation can be achieved to increase the purge rate of heat in summer by utilising a perforated flashing at the eave.
- 2: Normal Ventilation: Timber packer should be 45mm in combination with at least 45% open area cavity closer.
- 3: A minimum 45mm counter batten will achieve 400cm2/m cross-sectional flow area.

Alternatively: SOLITEX EXTASANA ADHERO® or SOLITEX MENTO® can be used in conjunction with the 3D separation mesh.

The depth of the cavity can be reduced for cavity closers with higher open area ratios.

Ventilation = (Packer) x (Open Area Ratio)

Normal Ventilation ≥ 200cm²/m

Title:SOLITEX® UM over vertical purlin ASV
